Hyperledger Aries Cloud Agent Python (ACA-Py) is a foundation for building decentralized identity applications and services running in non-mobile environments.

This is the Read The Docs site for the Hyperledger [Aries Cloud Agent Python](#). This site contains only the ACA-Py docstrings documentation extracted from the Python Code. For other documentation, please consult the links in the Readme for the [ACA-Py GitHub Repo](#).

If you are getting started with verifiable credentials or Aries, we recommend that you start with this [verifiable credentials and agents getting started guide](#).

Want a quick overview of the deployment model for ACA-Py? See [this document](#).

To investigate the code, use search or click the package links in the left menu to drill into the modules, subpackages and submodules that make up ACA-Py.

Developers that are interested in what DIDComm protocols are supported in ACA-Py should take a look at the [protocols](#) package. These should align with the corresponding [aries-rfcs protocols](#). Decorators defined in aries-rfcs and implemented in ACA-Py can be found [here](#). Some general purpose subpackages that might be of interest include [wallet](#) and [storage](#). For those agents playing different roles in a verifiable credential exchange, take a look at the [issuer](#), [holder](#) and [verifier](#) packages.

Please see the [ACA-Py Contribution guidelines](#) for how to contribute to ACA-Py, including for how to submit issues about ACA-Py.
